

SOLAR LITE LIGHTERS 50CT/ DISPLAY

Solar Lite Lighters 50ct/Display refers to a product that consists of a display containing 50 Solar Lite lighters.

Solar Lite lighters are a type of lighter that utilize solar power to generate an electric spark, which is used to ignite flammable materials such as candles, cigarettes, or campfires. These lighters typically have a built-in solar panel that collects and stores energy from the sun, allowing them to be used without the need for fuel or traditional flames.

The 50ct/Display notation indicates that the product comes in a display unit containing 50 individual lighters. This type of packaging is commonly used for retail purposes, as the display makes it easy for customers to see and access the product.

Please note that while Solar Lite lighters are designed to be more environmentally friendly and reusable compared to traditional lighters, they may not be suitable for all situations or materials. It's always important to follow safety guidelines and use caution when handling any type of lighter or open flame.
