

SMOKE ODOR CANDLE 13OZ

A smoke odor candle is a type of candle specifically designed to help eliminate or mask unpleasant smoke odors. These candles are typically infused with fragrance oils or essential oils that can help neutralize the smell of smoke in the air and replace it with a more pleasant scent.

A 13oz smoke odor candle refers to the size or weight of the candle. It means that the candle weighs approximately 13 ounces, which is a medium-sized candle. The size of the candle can affect its burn time, with larger candles generally lasting longer than smaller ones.

When using a smoke odor candle, it's important to follow the manufacturer's instructions for optimal results. Place the candle in a well-ventilated area away from flammable materials, and allow it to burn for a sufficient amount of time to distribute the scent throughout the space. Keep in mind that while smoke odor candles can help mask or reduce the smell of smoke, they may not completely eliminate it, especially in cases of heavy smoke or persistent odors.
